SUMMARY

Backend developer with a Computer Engineering degree, building REST APIs in Java and Spring Boot. Comfortable with JWT authentication and role-based access, transactional business logic over JPA and MySQL, automated testing at unit, web and integration level, and containerized deployment using Docker Compose with GitHub Actions CI. Additional full-stack experience with React and JavaScript. Looking for a backend or full-stack role in Istanbul.

PROJECTS

E-Commerce REST API — Java, Spring Boot, Spring Security, MySQL, Docker

github.com/bashar0101/ecommerce-api

- Built a REST API with JWT authentication and role-based authorization, replacing an insecure user-id query parameter so the server derives identity from the token instead of trusting the client.
- Implemented transactional order creation with stock validation and price snapshots, loading all products in a single batch query to avoid N+1 selects.
- Wrote 15 automated tests across four levels: JUnit 5 unit tests, Mockito service tests, MockMvc web-layer tests, and Spring Boot integration tests against an in-memory H2 database.
- Set up GitHub Actions CI running the full suite on every push, plus a multi-stage Dockerfile and a Docker Compose setup running the application alongside MySQL with a health check and a named volume.

Meals Recommendation System — graduation project

- Full-stack application recommending meals from user preferences and order history, applying machine-learning algorithms and object-oriented design patterns.

EXPERIENCE

Full-Stack Developer Intern — Het Technology, Istanbul, Türkiye

August 2023 – September 2023

- Developed full-stack features, building backend services with Java Spring Boot and MySQL and connecting them to React and JavaScript interfaces.
- Wrote modular, maintainable code from server-side logic through to the user interface, applying object-oriented principles within a collaborative engineering team.

SKILLS

Backend: Java, Spring Boot, Spring Security, Spring Data JPA / Hibernate, REST API design, JWT

Testing: JUnit 5, Mockito, MockMvc, H2, unit and integration testing

Databases: MySQL, H2

Tools & Infrastructure: Docker, Docker Compose, GitHub Actions (CI), Git, GitHub, Maven, Postman

Frontend: React, JavaScript, HTML, CSS

Other languages: Python, C/C++

EDUCATION

B.Sc. in Computer Engineering — Fatih Sultan Mehmet Vakıf University, Istanbul

Graduated July 2025
